Catalogue

Introduction

The Allegion OEM catalogue

Before you lies the **Allegion OEM catalogue**. Your guide in specifying your bicycles with; lights, locks and guards. This catalogue contains a summary of the best we have to offer from our combined brands and portfolios.

For each product we have stated the most standard available options, of course custom adaptations as different colours, cable lengths, connectors and special brackets are possible. Your Allegion contact person can help you with the details.

Further we would like to draw your attention to the many customised solutions we have offered in the past and can offer you in the future.

Allegion: best solution for every bike and brand

3

3 strong brands that appeal to consumers

Global production and supply chain

The best product portfolio for any brand and model

Increased innovation power

High customer service

AXA BIKE
KRYPTONITE
TRELOCK

Global brands serving global markets

Allegion helps keep people safe where they live, work and visit. As a leading provider of security products and solutions for homes and businesses, Allegion specialises in security around the doorway and beyond: everything from residential and commercial locks, door closers and exit devices, to access control and workforce productivity systems.

Continual product development across the product ranges delivers innovative access and security solutions for the differing requirements within the healthcare, education, hospitality, transport and commercial markets worldwide.

Our 3 strong bike brands

AXA BIKE

AXA BIKE

More than 120 years of expertise

AXA BIKE is inextricably linked to cycling culture. For more than 120 years, the company has made every effort to optimally protect the cyclist and the bike. As a real bike fan, AXA BIKE knows exactly what cyclists need to safely and confidently hit the road. Our developers transform the latest preferences and developments into user friendly, sustainable products. Thanks to our own production facilities in Europe we can always guarantee consistent high quality. This way AXA contributes to the safety and pleasure of the growing worldwide group of people who embrace the bike as a healthy and sustainable means of transportation.

TRELOCK

TRELOCK

Quality, innovation and reliability

TRELOCK is a traditional brand from Münster – the “bicycle capital” of Germany. It is one of the oldest German accessory brands and one of the most well-known in the bicycle sector - in fact it is a brand every fourth cyclist in Germany is aware of. Besides, over the past ten years, TRELOCK has been able to double its brand awareness (GfK survey 2015).

Our customers are at the focus of our actions. At the same time, the TRELOCK team is committed to the tradition of the brand and takes innovation in the field of bicycle locks, lighting and displays very seriously – today and in future for the benefit of cyclists in many countries of the world. With the know-how gathered over more than 160 years, TRELOCK stands for high-quality and reliable products for international markets.

KRYPTONITE

Kryptonite

Protect what you value

Over 40 years ago, Kryptonite began with a mission. While much has changed in bicycling, and bicycle security, our objective remains the same, we are here to empower you to protect what you value.

Through constant innovation, expert guidance, and our never-ending commitment, Kryptonite will continue to pursue our passion and do everything we can to ensure you can go where you want, when you want by offering smart, serious security solutions.

Sales and customer Service in every time zone

Allegion is always around the corner. With many offices all around the globe we are always available to give you full support with specifying your bicycles, handling orders and any other support we can offer.

With our own production facilities in Poland, France, and the Netherlands, we manufacture close to our customers. This offers numerous advantages, including optimal control over delivery times, seamless scalability, and flexibility in accommodating specific customer requests. Additionally, we maintain full oversight of quality control. Local production also aligns perfectly with our ESG policy.

Moreover, we collaborate with dedicated partners in the Far East and maintain offices across Europe, the United States, and Asia. This allows us to ensure not only high-quality products but also short lead times for bicycle factories in Europe and Asia.

Supply chain

We do not only ensure production and quality-control processes, but also coordinates worldwide logistics, working with qualified forwarding agents to deliver to OEM customers.

Quality

All our employees actively live the high Allegion quality standards thus creating continuous quality processes from the product development phase through production right up to the customer service.

Allegion has invested in new testing laboratories at each individual sites, and applies the latest test procedures. Our dedicate Allegion quality engineers in the Far east ensure that our dedicated partners fulfill the same high standards.

Our products fulfil the quality criteria of the most important testing authorities, and are therefore able to receive the major, internationally-accepted certifications.

Customised solutions

Endless possibilities

The bicycle industry is a dynamic and constantly evolving field that requires a well-coordinated process from ideation to design to engineering to produce high-quality products. We can help you with a custom made product, from lights to mechanical locks and to electronical safety and security.

Show your brand identity

No bicycle is alike. To empower brands we help producers to create the optimal bicycle for them. Our locks and lights can be tailored to the needs of each individual brand. Sometimes you want a signature component on your bicycle. Something which clearly shows your brand identity.

Technology, shape and colour: with Allegion everything is possible. Our joint development projects lead to solutions that are becoming standard in the industry. Numerous innovations result in solutions that have proven themselves time and again.

In cooperation with leading bicycle manufacturers solutions are generated which become an uniform ensemble with the bicycle. Our lock and light systems and the display technique are totally modulated due to the customer wishes.

From ideation to design and engineering

The strongest innovation platform

We have multiple centers of excellence with dedicated engineers and industry specialists to bicycle locks, lights and IOT. What distinguishes us: an open mind for all ideas, complete answers, fast processes, tailor made and outstanding solutions. We are dedicated, creative and the partner of choice around the world.

The process

Customized lights

Lights are often an eyecatcher on a bicycle and offer possibilities for your own signature. Custom lights will give your bike that unique personal touch which can be an outstanding design element or nicely integrated into the frame of the bicycle.

Twin Taillights

Combined with the Skybeamer we created the directly in frame integrated Twin-Tail taillights for Haibike. One bike with this eye-catching design will have 16 LEDs for perfect visibility and safety.

Integrated front light

The position lights have been developed together with Urban Arrow. The lights are integrated in the frame and are not only a great design fit but also ensure high visibility and thus safety in all conditions. Due to the position at the bike, the lights clearly indicate the width of the Cargo Bike.

Centurion Halo

Displayed is the integrated Centurion carrier rear light. The light is customized specifically for the Centurion carrier to be on Centurion's high-end E-MTB's and E-trekking bikes and impresses with a powerful and seamlessly looking light contour to the carrier.

The Fusion: integrated carrier rear light

This top integrated modern LED lighting technology provides uniform light for maximum safety: durable integration into the rack, brake light and emergency light function, shock resistant, robust and brightly radiating.

Digital Light Projection (DLP)

DLP Technology allows projection of all kinds of information on the street. For example, instructions or warnings in the form of icons, logos or animations. Adaptations are easily uploaded. The possibilities are endless which make the bike ride more fun, more comfortable and most important safer.

Brand identifier

For Sparta Bikes we created a LED logo integrated in the bicycle frame front fork which is a uniform ensemble with the bicycle and makes the Sparta brand stand out.

Customized locks

Integrated ring lock

A very aesthetic and distinctive solution is the integrated ring lock or cable lock, created for the ultimate convenience for your end users. For ease of use there is the possibility to get the lock cylinder keyed alike with the cylinder of the battery case from the E-Bike.

Integrated cable lock

A very aesthetic solution is the possibility for a cable lock fully integrated in the carrier. With this plug-in chain in combination with a ring lock you can to secure your bike to a fixed object.

Derby bracket

The custom 'Derby' folding lock bracket for e-bikes has a clever locking mechanism that fixes the lock in the holder, so it doesn't rattle while riding. It is mounted behind the seatpost for perfect integration into the bike's design.

Integrated folding lock for Cannondale

A 100% integration of the U-Lock into the rear carrier. The innovative Shock Absorbers ensure a rattle-free and silent ride, while the lock's status as the longest U-Lock on the market offers outstanding versatility in various locking scenarios.

AXA **in** E-rental Bike sharing made easy

For bike rental and sharing companies
Allegion has the perfect solution:
The Electronic Ring Lock.

The Electronic Ring Lock

We offer a highly secured lock with a user-friendly experience which can easily be integrated into an existing bike sharing platform. If you are just starting your renting business and do not have an app yet, we can support you with a of the shelf app fully customizable to your individual situation.

The lock can be mounted quickly and easily on a regular frame of a bike. Cyclist can conveniently rent or take a bike and lock it for a stop where ever they prefer. For an even safer solution the bike can be secured to the fixed world with an optional plug-in chain.

The Electronic Ring Lock is available in two versions. A Bluetooth low energy version, the lock can be opened with an app on your phone. The wired solution enables you to connect to your on bike Internet Of Things (IOT) device of your choice. It gives you more insight over your bike fleet and you never have to worry about handing out physical keys again.

The benefits of AXA IN

- Maximum security
- No more hassle with keys or codes
- Easy to integrate into existing bike rental or sharing platforms
- For docking and dockless solutions
- Use of standard bikes
- Possibilities for pay per minute
- Quick release locking for stop-park-go use

Authorization by Smartphone (Bluetooth®)

Electronic Ring Lock (E-RL) Bluetooth®

No keys

By means of Bluetooth® Low Energy the lock **A** is paired to the phone of the consumer **B** and the lock can be opened or closed easily without the hassle of keys.

Authorization

Authorization to open is given via your own reservation system **C** with use of the top of the line secured key-encryption of AXA's key server KeySafe-Cloud **D**. To ensure proper and secure locking of the bike, the locking procedure always needs to be done manually. For ease of use during stop-park-go's the AXA E-RL BLE offers a quick release button on the bike which will give you the option to lock down the bike without using the app.

Benefits E-RL Bluetooth

- Ultimate security with the KeySafe-Cloud
- Proven track record with tens of thousands locks on the street
- Independent: no e-bike or wiring required, battery lasts 12 - 24 months
- 100% build and developed in The Netherlands

E-RL Wired

The AXA IN Electronic Ring Lock (E-RL) can easily be connected to your existing on bike IOT device.

This is the ideal solution for large bike sharing and rental projects with their platform and communication already in place. Whether you communicate to your customer by smart phone, card or any other type of communication, AXA offers you the opportunity to link the Electronic Ring Lock to it.

The E-RL Wired offers you power and communication via wire to the IOT device. Whilst AXA offers you a secure and robust hardware solution, you can link to the platform and app of your choice.

Authorization

The Electronic Ring Lock **A**, connects to the on bike IOT device **B**, which communicates to your rental system **C**.

It is a simple and safe way of sharing bicycles with an app on a smartphone and is ideal for medium and large bike sharing and rental projects.

Benefits E-RL Wired

- Secure mechanical hardware
- Freedom to determine your own security protocol between lock-IOT device-user
- No on-board IOT device yet? Learn more about the AXA IN Connect solution!

Authorization by card

Creating a more secure world, protecting what we value most

At Allegion, we understand how vulnerable the earth and the environment are, which is why we aim to reduce our environmental impact to a minimum with ambitious Environmental, Social and Governance targets.

Our ambitions

- All our locations should run on carbon-free electricity by 2030.
- We aim for a 25% reduction of our greenhouse gas emissions by 2030.
- We aim to be fully carbon neutral by 2040.

Sustainable development goals

We have selected six goals that are most relevant to our company and the three cornerstones of our sustainability strategy: Environment, Social and Governance (ESG).

We support the United Nations Sustainable Development Goals, which aim to make the world a better place. The 17 goals for 2030 have been agreed by all 196 United Nations (UN) member states, including the Netherlands.

Thousands of organisations and millions of citizens across the globe were asked to help define the SDGs.

- 1 SDG 3 Good health and well-being: ensure healthy lives and promote well-being for all at all ages.
- 2 SDG 5 Gender equality: achieve gender equality and empower all women and girls.
- 3 SDG 8 Decent work and economic growth: promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all.
- 4 SDG 12 Responsible consumption and production: ensure sustainable consumption and production patterns.
- 5 SDG 13 Climate action: take urgent action to combat climate change and its effects.
- 6 SDG 17 Partnership to achieve the goals: strengthen the means of implementation and revitalise the global partnership for sustainable development.

Environmental

Expedition zero

Minimum footprint, zero waste – no wasting

Our planet is the only home we have, and we need to protect it together. That's why we're committed to reducing our environmental impact. We are taking steps to reduce our ecological footprint and to avoid wasting resources unnecessarily. Our offices and factory in Veenendaal (200 FTE) already run on 100% green electricity. Charging stations for electric cars are installed in our parking spaces.

Social

Because we care

Great place to work

We believe that our success is measured not just by our financial results, but also by the impact we have on the world around us. That's why we accept our responsibility to society. It means we are committed to protecting all those who use our products and all those who work for us by creating an inclusive workplace where everyone feels respected and valued.

“At Allegion, we're dedicated to keeping people safe and secure while protecting the planet. Together, we can create a world where everyone can move seamlessly.”

John Stanley
Vice-president of Global Portable Security

Governance

Responsible citizen

Maximum impact - Partner of choice

As a socially responsible business, we understand that good governance is essential to the success of our company. We employ strict ethical and integrity standards in all our activities and we comply with all relevant legislation and regulations. We aim to make a positive impact on the world around us by embracing governance practices that promote sustainability and responsibility.

Get to know more

If you would like to find out more about our ambitions and targets on Environmental, Social and Governance subjects, please visit our website where there is more to be found. Scan the QR-code!

Bicycle lights

Allegion has a wide range of lighting products, from lights with which you can be seen, to lighting with plenty of light with which you have an excellent view of the road. For every bicycle and cyclist AXA and TRELOCK have the right lighting.

More than a dynamo

In addition to lighting powered by a dynamo Allegion also has lighting which can be connected directly on an E-bike battery, or has batteries by itself.

New in the assortment are our USB rechargeable lighting products, with which you never have to look for new batteries.

Lumen and Lux

The amount of light is measured with Lumen or Lux, but what is the difference?

With Lumen the amount of light is measured from the source per unit of time, regardless of where the light is radiated. With Lux they measure the amount of light that shines on a surface area, for example, on a square metre.

In this brochure we will use the amount of Lux per light.

Daytime Running Light (DRL)

Depending on ambient brightness, a built-in light sensor chooses between Low Beam and DRL. The DRL has, thanks to special DRL LEDs, another light distribution which makes the cyclist more visible during the day for additional safety.

Visibility

Where does 'To see' and 'To be Seen' stand for?

When you are participating in traffic on your bike, it is just as important to be able 'to see' as it is to 'be seen' by other road users.

'To See' indicates how much you can see of the road with the lighting itself. These lights are mainly used by cyclists on poorly lighted roads so they have a good view of the road.

'To Be Seen' indicates from how many metres other road users can see you. This lighting is especially useful for cyclist in the city and on well-lit roads.

High Beam

High Beam has, compared to the usual Low Beam, a different Light Distribution thanks to additional LEDs. Similar to High Beam in the car, the light shines far more in the distance and does not have the characteristic cut-off line. That's why High Beam should only be activated if no other traffic participants can be blinded. Especially in very dark conditions or when cycling with high speed, High Beam is a very important safety feature for every cyclist. The High Beam Light can be activated via pushing on the handlebar switch.

Automatic function

The automatic function makes change of light the mode depending on ambient conditions like for example the ambient brightness.

Updated bicycle lighting regulations

If you want to avoid business risks and ensure compliance with the legal requirements for bicycle lighting, you will soon come across Allegion, with the brands AXA BIKE and Trelock. Especially now that the requirements for bicycle lighting in Germany and France are changing.

Allegion works closely with the government in both countries and has access to important information at an early stage. Additionally, we work closely with decision-makers in traffic safety. In Germany we are part of the German Council for Transport Safety (DVR, Deutscher Verkehrssicherheitsrat). In France, we participate in a working group on traffic safety with government officials and engineers.

Changes in France

The minimum light output has been increased from 4 to 10 lux. The rules for light distribution have also been adjusted. To ensure that the light distribution meets the regulations, every type of bicycle light that is introduced to the market must now be reapproved by a testing laboratory. This lab reports approved bicycle lights to the government, which then issues a certificate to the manufacturer. Finally, there is a new

rule for battery-powered bicycle lights: previously, they had to last at least half an hour, but now a lamp must burn for a minimum of five hours.

Changes in Germany

The light distribution will be more strictly defined, and there will be stricter regulation for the color of the light. The minimum battery life will also be increased to 5.5 hours. After five hours, an indicator must indicate that the battery is almost empty, and the light must continue to burn for another half an hour. Finally, it will be officially allowed to use brake lights on bicycles, with the same brightness as those for motorcycles and cars.

Product range

Already in 2023, Allegion started adjusting its product range. We have included new bicycle lights in our catalog that comply with the new German and French regulations. Below is an overview of the AXA and Trelock lighting that meet these requirements. In 2026 Allegion will add 2 new round shape light families which are also compliant to the new regulations, The AXA globe and the Trelock Rise. These products will meet the legal requirements and eliminate business risks for our customers.

The AXA Light with 30 Lux impresses with an extensive light pattern on the road which makes sure you will have good visibility for a safe ride. For extra safety the steady light function in the dynamo version ensures that you are seen for 4 minutes when standing still.

Besides the landscape orientation - which is a perfect design match to bikes with increasing frame, stem and handlebar dimensions - the design is subtle to keep the attention on the bike, not on the light.

The fork bracket is a perfect design match for the AXA light design, making sure the light will look well integrated to the bike. The product design is also very well suitable for handlebar mounting via faceplate solutions or handlebar brackets.

AXA

Nxt 45

Integrated reflector

45 LUX
StVZO
French APPROVAL
65 METERS
3750 METERS

The AXA Light with 45 Lux impresses with an extensive light pattern on the road which makes sure you will have good visibility for a safe ride. For extra safety the steady light function in the dynamo version ensures that you are seen for 4 minutes when standing still.

Besides the landscape orientation - which is a perfect design match to bikes with increasing frame, stem and handlebar dimensions - the design is subtle to keep the attention on the bike, not on the light.

TRELOCK

Lighthammer 60

Handlebar bracket for E-Bike

60 LUX StVZO French APPROVAL 80 METERS 4500 METERS

The Trelock Lighthammer with 60 Lux impresses with an extensive light pattern on the road which, besides being very wide and homogenous, ensures best illumination both in the distance as well as close in front of the bike.

For best safety during the day, the Dynamo version is available with day time running light including automatic function. The steady light ensures to be seen by other road users even when standing still. The unique edgy design with landscape orientation

is still impressively compact and expresses the high light performance. It is a perfect design match to bikes with increasing frame, stem and handlebar dimensions. Thanks to the special housing version offered for mounting e-bike lights to the handlebar via the dedicated bracket or faceplate solutions, the light looks perfectly integrated into the overall bike design.

The extended scatter glass integrates nicely to the side of housing and increases safety by the high visibility of the cyclist from the side.

Rise 90

Fork bracket version (reflector optional)

90 LUX StVZO French APPROVAL HIGH BEAM 110 METERS 6000 METERS

The TRELOCK Rise sets a new standard in bicycle lighting with its modern round design and advanced features, engineered for demanding cyclists.

Specifically designed for e-bike integration, offering reliable and consistent performance. It has a powerful 90 lux illumination for outstanding road visibility, and the housing of the light is made of durable aluminum.

With additional high-intensity power LEDs the daytime running light function ensures that you remain highly visible, even in bright sunlight, significantly increasing daytime safety.

The integrated high beam mode, easily activated via handlebar control, provides a wide field of light for improved visibility over longer distances. This feature enhances safety and rider confidence, especially in low-light or challenging conditions.

Mounting Options: Flexible installation on the fork bracket or with our elegantly designed handlebar mount for a sleek and customized look.

The light is fully compliant with the latest German and French regulations for bicycle lighting. Manufactured in our own factory in Clamecy, France, reducing transport costs and minimizing environmental impact.

AXA

Nxt 130

Integrated reflector

130 LUX
StVZO
140 METERS
7000 METERS

The AXA Nxt 130 is an E-bike headlight with a light output of 130 lux and is specially designed to be directly connected to a 12V DC E-bike battery. The housing is made entirely of aluminum, which ensures optimal heat dissipation.

The front light has a compact, square design that perfectly matches the geometry of E-bikes! The integrated reflector provides extra safety as it makes you more visible to oncoming traffic.

The light pattern of the Nxt 130 is the best that AXA has introduced to the market so far. This is due to the very wide beam that covers the entire street and the good amount of light directly in front of the bike.

The headlight comes with a bracket so you can mount it on the front fork of the bike. It fits on all standard forks. This bracket can be replaced by a single-arm aluminum handlebar bracket so you can mount the light under the E-bike computer.

Lighthammer Premium

Handlebar bracket for E-Bike

300 LUX
StVZO
HIGH BEAM
S-PED
120 METERS
6500 METERS

The road has never been brighter: the low beam of the Lighthammer Premium puts a full 200 lux on the asphalt! If even more visibility is needed, the high beam mode with up to 300 lux can be switched on using the handlebar control. With the powerful light output of the headlight, correct alignment is particularly important. A Level Function is integrated into the Lighthammer Premium to help with correct adjustment. During the day, the cyclist is assisted by a clearly visible Daytime Running Light.

Thanks to a sensor, there is automatic switching between daytime running light and low beam. Environmental considerations are also taken into account: in order to conserve the battery with the high output, the headlamp switches to Waiting Mode (can be turned on and off) when the bicycle is at a standstill. The light output is reduced by 50% until the bike moves again. The Lighthammer Premium is available as an e-bike version and as a version for S-pedelecs.

AXA Visto 3 Set

Integrated reflector

The Visto 3 battery light set is user-friendly and fits seamlessly and easy onto any bike. Designed and manufactured in Europe. Compliant with the latest French, German and Danish regulations, the Visto 3 light set ensures safe and legal bicycle lighting. Powerful and safe illumination.

The lights are powered by larger AAA batteries, not only eliminating the risk associated with Coin Cell CR2032 batteries - which can be hazardous if swallowed by children - but also extending the battery life.

Reducing bike theft

Approvals

To reduce the chance of getting your bicycle stolen there are independent institutes that approve locks set the objective to promote and improve anti theft products. They test various locks to the requirements so that they can receive a quality label. An approved lock does not guarantee that your vehicle will not get stolen, but ensures you that the risk of theft decreases significantly.

For most insurance companies approved locks are required for closing a two-wheeler insurance. What requirements apply to your bicycle can be found in the policy conditions of the insurance company.

Requirements on approvals can differ per country, based on variables such as theft methods used and weather conditions.

Key alike

The keyed-alike lock systems for E-bikes from Allegion convince with highest comfort. The Allegion lock solutions are intermateable with battery cases of leading suppliers. Hence there is only one key for the bicycle lock and the battery case of the E-bike. The lock cylinder is available for the battery cases mounted at the frame or under the rack.

This allows us to create integrated solutions in close cooperation with manufacturers, which continue to increase the range of functions, user-friendliness and active and passive safety.

Key service

It can happen that you lose your bicycle key. This is not a problem! We have a special key service website where an extra key can be ordered through and will be delivered within a few days. We produce and send keys in-house. As a result, we offer a fast service and certainty, for both consumers as dealers. You can pay with iDeal, PayPal, Creditcard or a one-time payment authorization.

*AZ - Retractable keys / **NAZ - Non retractable keys

Bike locks

With its bike lock solutions, Allegion offers customers more than just security for their bicycles. Innovative additional solutions provide the cyclist with increased security and convenience. Modern cylinder technology and high quality materials provide reliable bicycle locks and as an added plus also reduce the weight of the lock.

Any lock for any biker

The number of bicycle thefts is on the increase and only every tenth bicycle is eventually returned to its original owner. However, cyclists investing in a good lock reduce the risk of their bicycle being stolen.

Allegion bicycle locks offer an adequate amount of security for every opportunity. Using the right lock can contribute to minimizing the risk of bicycle theft.

Setting new standards

A new generation ring locks

Security features

High level anti-theft protection

All parts of the ring lock have been redesigned and optimised. Every aspect in developing has resulted in ultimate security features.

High protection cylinder

Enhanced cylinder technology with a focus on power key attacks and lock picking.

- Two different milling codes in the key (front/back)
- Cut out in the key to weaken the power key
- More secure key permutations
- Bigger rotating angle for improved attack resistance

Strong square shackle

The 8.5 mm square shackle is even better equipped to withstand attacks by saw or bolt cutter than its round counterpart.

- Change from round to square shape for better bolt cutter resistance
- When manipulated, the square shackle will fixate itself inside the casing when twisted
- The construction of the lock makes for smoother operation and guidance of the shackle

Circumferential welded lock housing

The lock housing is welded all around instead of riveted, blocking any access points on the sides. There are no slits in the metal to limit the access points for peeling attacks. We are innovating against the competition after years of experience with the welding process of the Victory ring lock.

Compatible with ULC plug-in portfolio

The AXA Atlas comes as standard with the extra safe plug-in option, allowing the bicycle to be secured to a fixed object with locking of the ring lock and plug-in in only one action.

Improved features

Smart design to fit even more types of bicycles

Ergonomic button

Being used to close the shackle, the button is positioned on the side allowing easy operation

Intuitive locking

With the key vertically inserted in locked position

Compact lock head

37,4 mm

Optimised and compact lock housing

With integrated shock absorbers to minimize any rattling noises and enable smooth operation

Enhanced operation

Guidance for smooth operation

Inner diameters

- Standard up to 58 mm
- Large up to 72,5 mm
- Inner height 108 mm

Standard

Large

European product

- Components are produced in house
- Reduced transport costs
- Quick production adaptation

Minimized environmental impact

- Produced in The Netherlands
- Use of recycled materials
- Less single use plastics
- Less waste by optimizing tooling

Battery locks

Available with battery locks like Bafang, Bosch, Shimano, Phyllion, Greenway, Fazua, ELH, Yamaha and Slam. See all our combination at page 102.

AXA Atlas

The new generation ring lock has various technical improvements and the design is fully up-to-date. The ring lock is produced in The Netherlands, to maximize production flexibility and limit our carbon footprint.

The new design of the ring lock has a robust and angular look that perfectly matches modern bicycles. The welded lock housing, up to date cylinder design and square shackle pushes this lock to the top of our line in terms of security.

The ring lock is available in 2 mounting sizes and offers an increased inner diameter of the lock. This,

combined with the reduced height of the lock head which is 20% lower compared to the AXA Defender, makes for easy assembly and fit to a wide variety of frames.

To decrease the risk of roll away theft the lock offers the option to use an additional plug-in chain or cable.

* With the Trelock Add-it, you can easily create additional mounting points on your bike, ideal for attaching your folding lock or bottle holder.

AXA

Fold Series

The AXA Fold is the newest addition to our range of folding locks. With its compact and modern design its an excellent addition to our range.

The AXA Fold comes with a handy holder. This can be mounted to the bottle cage or you can secure it around the bar with the 2 supplied straps. The lock is positioned at the bottom of the holder, so you can easily tilt it out. Since you do not have to slide the lock out of the holder, it fits all frames. Thanks to the revolutionary locking mechanism, the lock is fixed in the holder, so that it doesn't rattle during cycling.

Thanks to its flexible joints and its light weight, the lock is extremely easy to use. The lock is made from tempered steel and is resistant to cutting and pulling.

The Fold has a convenient click-in function. There is a notch on the side where you can easily insert the lock. As soon as you do that you will hear a clear click. The key can now be removed and it is locked. The lock has a soft casing to prevent any scratches to the frame of your bike.

Now available:

One key system for multiple locks

Battery Locks - Keyed alike locks

Keyed alike locks 1 key 2 locks

In cooperation with many E-bike component suppliers we provide the E-Bike manufacturers keyed-alike product solutions. The battery case either mounted at the frame or under the rack and the ring lock can be locked with just one key. This means the highest comfort. Customised colour variations are possible. The lock mechanisms are also available as single versions for the battery case only.

Long key

Also available with a long key.

Other possibilities

Besides the above combination, it is also possible to have the same key for a folding lock and the battery pack lock. There are multiple options for AXA and Trelock folding locks. Extra safe because the bike can be secured with 2 locks instead of 1. It can also be locked to a fixed object so the thief can not take the bike to another location.

Another option is the AXA set of the Solid Plus ring lock and the Linq City chain with the same key.

Battery lock range

The portfolio below shows you some of the most sold locks of our range of battery locks. Besides battery locks with a standard key we also have some versions with a long key which you can see in the table. Contact your sales manager to find out all the options we have available and learn more about our customized options.

Secure the ring lock to the fixed world

Many of our ring locks are equipped with the possibility to include a plug-in chain or cable. With this plug-in chain the bicycle can be connected to the fixed world. This is an additional barrier for bike thieves since they can not easily move your bicycle to a less visible area to break the lock.

For additional brand exposure we offer custom options like your own brand logo.

Ask your Allegion contact person for the colour and logo possibilities.

Mounting made easy

For bicycles that are not equipped with standard mounting points for ring locks we offer various alternative mounting solutions, allowing you to mount the ring lock on the frame or for example on the cantilever brakes.

Adding mounting points

Discover the versatility of the AXA Fix and Trelock Add-it, the perfect solution for bikes without bottle cage mounts in the frame. With the Fix or Add-it, you can easily create additional mounting points on your bike, ideal for attaching your folding lock or bottle holder.

Wide range of Chain Guards

Allegion has a wide range of chain guards that protects the chain wheel from sand and dirt and also protects the clothing of the cyclist. We have closed and half closed chain cases, chain discs and chain guards that are perfectly suited for city and smaller bicycles. Our engineers focus on making chain guards that are easy to mount, have enough space for the chain and are quick to disassemble for service.

Custom solution

We have our own plastic factory where we can make any chain guard in any colour. It is also possible to make the chain guard and the ring in a different colour or in a matt or glossy variant. This way there are infinite possibilities to fully customize the chain guard. Our clients can distinguish their bike in the new season for a very sharp price.

AXA Fit

The AXA Fit is suited for 38 teeth chain wheels and has been tested together with a number of clients on all standard gear systems extensively and is tailor made. So this chain guard fits on a wide assortment bicycles.

The AXA Fit is clicked on the disc in a simple way. This allows them to be quickly installed at the factory and disassembled during service. To adjust the chain guard on the frame of the bike there are several mounting sets available.

The AXA Fit is wider and deeper and has therefore more space for the chain and is very silent. When the chain loosens up you will hear no noise from the chain coming against the chain guard.

Because both the chain guard and the ring are available in every colour, there are infinite possibilities to fully customize the chain guard. In addition, the cabinet is available in a matt and glossy variant.

AXA

Multi open

Black

Grey

The AXA Multi is a closed chain case which is perfectly suited for city bicycles.

With a closed chain case you protect your chain from dirt and your clothing from getting stuck in the chain which can cause crashes with your bicycle.

On top of that you maintain the quality of your chain, dirt and moisture do not have any chance, which will extend the life span of your chain considerably.

The Multi can be easily mounted through a disc and click bracket. Besides that the click box rear provides a firm closure.

AXA

Scope 2

The AXA Scope2 is a modern shaped chain guard which is easily mounted.

This chain guard protects your clothing against damages and protects your chain against moisture and dirt.

The elegant design is complemented with a coloured strip which covers the mounting holes. The strips are made out of ABS and the screen is made from polycarbonate.
